MODERNIZE YOUR BUSINESS WITH CONFIDENCE

SoftServe's application modernization services streamline processes, reduce costs, and enhance performance

YOUR MODERNIZATION JOURNEY CHALLENGES

When you embark on your cloud migration and modernization journey, you often encounter challenges when it comes to modernizing existing systems.

-  Reluctance to adopt rearchitecting strategies due to perceived demands on time, expertise, and costs.
-  Opt for minimal-effort strategies like rehosting or relocating, which doesn't fully exploit the advantages of cloud-native development and managed services.
-  Absence of straightforward tools to assess modernization complexity worsens uncertainty.
-  Deployment of modernized apps in the cloud is complicated by the intricacies of containers, serverless, and other cloud-first technologies.
-  Without needed cloud skills, this skills gap often results in maintaining legacy applications in their current state and delaying a needed modernization process.

CONQUER YOUR CHALLENGES

You will overcome the challenges in cloud migration and modernization with SoftServe through platform engineering and self-service platforms to provide customized solutions.

SKILLS

Addressing your skills gap, expert teams, and educational workshops, along with the **SoftServe Application Modernization Platform (SAMP)** to simplify development with standardized frameworks, are offered.

TIME

For your time constraints, SAMP's modular design and rapid setup enable faster application modernization, integrating seamlessly with existing systems.

COSTS

Your cost demands are tackled through SAMP's standardized processes and cost optimization practices, reducing development, operational, and infrastructure expenses, while boosting ROI.

BENEFITS OF APP MODERNIZATION WITH SOFTSERVE

Accelerate your time-to-market by up to 5x with SoftServe's Application Modernization Platform (SAMP) by transitioning to platform engineering and building customized self-service platforms, ensuring faster delivery of new features and services.

Reduce cloud infrastructure costs by up to 30% with optimized resource usage and cost-effective solutions.

Enhance security and compliance with built-in features that align with global standards, protecting your data and operations.

Boost efficiency with standardized workflows and applications, reducing complexity and streamlining processes across your enterprise.

SEIZE THE MOMENT

If you cling to outdated systems in today's fast-paced digital world, you will hold back your business. Embrace the opportunity to modernize your applications and unlock new potential. Without modernization, you risk falling behind your competitors who are already using the power of cloud-native technologies and the advantages of Generative AI integration.

UNLOCK YOUR NEW POTENTIAL

SoftServe's application modernization services are your gateway to a more agile and efficient business. By integrating our platform into your operations, you will streamline processes, reduce costs, and enhance performance. Our service offers a comprehensive approach, from initial assessment through SAMP pilot to full implementation, warranting a seamless transition. Use cases include transforming legacy systems into microservices, optimizing workloads, and using cloud-native technologies for better scalability and performance.

ACHIEVE EXCELLENCE WITH SOFTSERVE

Partnering with SoftServe means you will achieve tangible results. Our clients have seen up to 5x faster time-to-market and up to 30% reduction in cloud costs. With our expertise in Amazon Web Services (AWS), Google Cloud Platform (GCP), Microsoft, and NVIDIA, we provide industry-specific solutions that drive business success.

SoftServe's application modernization use cases show tangible success in transforming legacy systems and enhancing operational efficiency.

For instance, a SoftServe client had delayed modernizing its monolithic application built on .NET, Windows Servers, and Microsoft SQL Servers. With SoftServe's modernization assessment and SAMP pilot, the client experienced a comprehensive assessment and validation process that highlighted the benefits of modernization, initiating a strategic upgrade.

Another client used the SAMP pilot to identify and mitigate risks related to security, cost optimization, and operational excellence. This approach resulted in significant improvements, underscoring the value of our customized solutions in driving successful modernization outcomes.

Our trusted partners include AWS, Google Cloud, NVIDIA, and Microsoft, ensuring you have access to the best technology solutions available.
