

SOFTSERVE'S APP PLATFORM (SAMP) WITH AWS

ACCELERATE BUILDING SELF-SERVICE PLATFORMS

While application teams are meant to quickly deliver value for end users, issues like handling cloud environments and security compliance serve to slow them down. The emerging solution, called platform engineering, combines DevOps and business agility.

By “building workflows, toolchains, platforms, and documentation,” platform engineering supports application teams to better deliver business value. Enabling developers with self-service options leads to faster product development, deployment, and time-to-market.

Being able to seamlessly automate and scale environments reduces complexity, decreases duplicate efforts, and alleviates the burden of managing underlying infrastructure.

With the right platform engineering process in place, developers can focus on creatively solving larger issues and ultimately increasing your ROI.

TRANSITION TO PLATFORM ENGINEERING WITH SAMP

SoftServe's Application Modernization Platform (SAMP) delivers a scalable, secure, and customizable platform as a service (PaaS). Ready to plug into any CI/CD process, SAMP provides your application teams the foundation for faster delivery, optimized operations, and lower costs.

Using AWS best practices and our extensive experience as an AWS Premier Tier Services Partner, our experts will choose between Amazon ECS, Amazon EKS, or AWS Lambda for the platform's core component.

Ultimately, you'll have a platform where your team can leverage repeatable, reusable solutions across the company, seamlessly run and scale workloads, and dramatically reduce deployment times.

softserve

BUSINESS BENEFITS

Less than 20

minutes to deploy —
easy and fast

Up to 5X

reduced time-to-market for
new features and services

UP TO 30%

lower cloud
infrastructure costs

Customize structure to meet
specific business needs

Lower costs by only paying
for what you need

Optimize operations with
streamlined processes

Faster time-to-market with build
once-deploy-many model

Standardize workflows and
applications to increase efficiency

Maximize resource usage and
scalability to accelerate innovation

Ensure global security standard
compliance

Improve disaster recovery
with clear protocols

Reduce hands-on maintenance
demands

AWS PARTNERSHIP AND VALIDATED SOLUTION

For over 30 years, software companies and enterprises have relied on SoftServe as a global IT leader. Since 2014, SoftServe has teamed up with AWS to implement end-to-end solutions

500+

AWS Certified
Resources

50+

AWS Certified Solution
Architects

40+

AWS Professional
Certifications

In 2023, AWS extended its **AWS Foundational Technical Review (FTR)** to partner services. Based on our status as a Premier Services Partner with extensive AWS experience, SoftServe was selected as the first pilot partner for FTR for service offerings.

AWS FTR validated this SAMP offering, verifying it met specific AWS foundational criteria.

It's time to embrace a future where innovation meets efficiency with **SoftServe's App Modernization Platform (SAMP)**. Invest in a solution that not only meets today's demands but scales for tomorrow's success.
